

Meridian Digital Solutions

Q4 2024

Information Security Assessment

Assessment Period: October 1 - December 31, 2024

Report Date: December 10, 2024

Prepared by: Information Security Team

Lead Assessor: Robert Kim, CISSP, CISM

Reviewed by: L. Thompson, CIO

Status: Released

Distribution: IT Leadership, Security Operations, Infrastructure Ops

1. Executive Summary

This report presents the findings from the Q4 2024 quarterly information security assessment conducted across all three Meridian Digital Solutions data center environments: DC-East (Ashburn, Virginia), DC-West (The Dalles, Oregon), and DC-Central (Elk Grove Village, Illinois). The assessment covered 153 production hosts spanning network infrastructure, server systems, and application-layer components.

Key Metrics:

Total findings identified: 60 (8 Critical, 15 High, 25 Medium, 12 Low/Informational)

Mean time to remediate Critical (Q3): 11.2 days

Risk trend vs Q3 2024: Elevated (up from Moderate)

Hosts with at least one Critical finding: 8

Hosts with at least one High finding: 15

External attack surface reduction vs Q3: 12%

The overall risk posture has elevated from Moderate in Q3 to Elevated in Q4 due to the discovery of several unpatched remote code execution vulnerabilities affecting production systems in DC-East, a network segmentation violation involving a database server operating within a DMZ network zone, and newly disclosed zero-day vulnerabilities in widely deployed software components.

Compared to Q3 2024 which had 38 total findings (4 Critical, 6 High, 14 Medium, 14 Low), Q4 shows a 58% increase in total findings and a 100% increase in Critical findings. The increase is partially attributed to expanded scanning coverage and newly published CVEs affecting Palo Alto Networks and VMware products.

Remediation timelines have been established with the Infrastructure Operations and Network Engineering teams. Critical findings require resolution within 14 calendar days per the Meridian vulnerability management policy (SEC-POL-012). High findings follow a 30-day remediation window.

2. Assessment Methodology

The Q4 2024 security assessment employed a multi-layered evaluation methodology combining automated vulnerability scanning, manual penetration testing, configuration auditing, and compliance framework mapping. The assessment scope encompassed all production assets across the three data center environments.

2.1 Tools and Platforms Employed

The following security assessment tools were used during the evaluation period:

- Qualys VMDR (Vulnerability Management, Detection, and Response) v10.22
Scan profile: Full Authenticated Scan with CIS compliance plugins
Scanner appliances deployed at each DC site for local scanning
- Tenable.io Professional Edition
Plugin set updated through December 5, 2024
Credentialed scans using service accounts with least-privilege access
- Burp Suite Professional v2024.9
Used for web application security testing of customer-facing services
- Nessus Professional v10.6.4
Supplementary scanning for network device assessment
- CIS-CAT Pro v4.28
CIS Hardening Guidelines Level 1 and Level 2 compliance assessment
- Wireshark v4.2.0
Network traffic analysis and segmentation validation
- BloodHound Community Edition v5.x
Active Directory attack path analysis

2.2 Scan Schedule and Scope

Date Range: October 14-18, 2024 (Week 1), November 11-15, 2024 (Week 2), December 2-6, 2024 (Week 3)
DC-East scans: October 14-15 (85 hosts), November 11-12, December 2-3
DC-West scans: October 16 (52 hosts), November 13, December 4
DC-Central scans: October 17-18 (55 hosts), November 14-15, December 5-6
Total hosts scanned: 153 (147 active + 6 recently provisioned)
Scan coverage: 100% of production hosts
Average scan duration: 4 hours 22 minutes per data center
Credentialed scan success rate: 98.7% (2 hosts required manual re-scan)

2.3 Compliance Frameworks Referenced

- NIST Cybersecurity Framework (CSF) v2.0
- CIS Controls v8 (Implementation Group 2)
- PCI-DSS v4.0 (applicable to DC-East payment processing scope)
- SOC 2 Type II Trust Service Criteria
- HIPAA Security Rule (applicable to DC-East healthcare data scope)

- ISO 27001:2022 Annex A controls

3. Vulnerability Scan Results

The following sections detail all findings identified during the Q4 2024 assessment period, organized by severity level. Each finding includes the CVE identifier (where applicable), affected hosts using their fully qualified domain names (FQDNs), CVSS v3.1 base scores, and remediation recommendations.

3.1 Critical Findings (8)

FIND-001: CVE-2024-38812 - VMware vCenter Server Heap-Based Buffer Overflow

Affected Host: `srv-e-015.dc-east.meridian.internal` | IP: `10.1.101.25` | CVSS: 9.8 | Status: Open

A heap-based buffer overflow vulnerability exists in the VMware vCenter Server DCERPC protocol implementation. Successful exploitation allows unauthenticated remote code execution with SYSTEM-level privileges. The affected host runs vCenter Server 8.0 Update 2b which is vulnerable to this attack vector. Immediate patching to vCenter Server 8.0 Update 3 is required. This host manages the VMware cluster for DC-East production workloads across 53 active hosts.

Remediate

FIND-002: CVE-2024-21887 - Ivanti Connect Secure Command Injection

Affected Host: `srv-e-022.dc-east.meridian.internal` | IP: `10.1.110.45` | CVSS: 9.1 | Status: Open

A command injection vulnerability in the web management interface of Ivanti Connect Secure allows authenticated administrators to execute arbitrary commands on the underlying operating system. The affected host at `srv-e-022.dc-east.meridian.internal` is running Ivanti Connect Secure version 22.4R2.2 and requires upgrade to 22.6R2.3 or later. Note: this host is located in the DMZ-East segment (VLAN 110, `10.1.110.0/24`) which increases exposure to external threats.

Remediate

FIND-003: CVE-2024-3400 - Palo Alto Networks PAN-OS Command Injection

Affected Host: `srv-w-031.dc-west.meridian.internal` | IP: `10.2.100.41` | CVSS: 10.0 | Status: Open

A command injection vulnerability in the GlobalProtect feature of Palo Alto Networks PAN-OS allows an unauthenticated attacker to execute arbitrary code with root privileges on the firewall. The host `srv-w-031.dc-west.meridian.internal` is running PAN-OS 10.2.7-h3 and requires immediate upgrade to PAN-OS 10.2.9-h1 or later. CVSS score of 10.0 indicates maximum severity. This firewall protects the DC-West perimeter and handles GlobalProtect VPN termination for approximately 450 remote users in the western region.

Remediate

FIND-004: CVE-2024-6387 - OpenSSH regreSSHion Remote Code Execution

Affected Host: `srv-c-012.dc-central.meridian.internal` | IP: `10.3.102.22` | CVSS: 8.1 | Status: Open

A signal handler race condition vulnerability in OpenSSH server (sshd) allows unauthenticated remote code execution as root on affected Linux systems. The host `srv-c-012.dc-central.meridian.internal` is running OpenSSH 8.9p1 on Ubuntu 22.04 and must be updated to OpenSSH 9.8 or later. The race condition requires approximately 10,000 connection attempts but is reliably exploitable in lab conditions.

Remediate

FIND-005: CVE-2024-47176 - CUPS Remote Code Execution Chain

Affected Host: `srv-e-038.dc-east.meridian.internal` | IP: `10.1.118.48` | CVSS: 9.0 | Status: Open

A vulnerability chain in CUPS (Common UNIX Printing System) allows remote unauthenticated attackers to execute arbitrary code through crafted IPP requests. The cups-browsed service on `srv-e-038.dc-east.meridian.internal` is listening on UDP port 631 and accepts connections from any source. The host runs CUPS 2.4.2 on RHEL 9.3. Combined with CVE-2024-47076, CVE-2024-47175, and CVE-2024-47177, the full chain enables RCE without authentication.

Remediate

FIND-006: CVE-2024-4577 - PHP CGI Argument Injection (Critical Instance)

Affected Host: `srv-c-041.dc-central.meridian.internal` | IP: `10.3.101.51` | CVSS: 9.4 | Status: Open

A critical PHP CGI argument injection vulnerability allows unauthenticated remote code execution on Windows systems running PHP in CGI mode. The host `srv-c-041.dc-central.meridian.internal` runs PHP 8.1.27 in CGI mode on Windows Server 2022. The vulnerability bypasses CVE-2012-1823 mitigations through Best-Fit character encoding behavior on Windows systems.

Remediate

FIND-007: CVE-2024-21762 - Fortinet FortiOS Out-of-Bound Write (Critical Instance)

Affected Host: srv-w-009.dc-west.meridian.internal | IP: 10.2.109.19 | CVSS: 9.6 | Status: Open

An out-of-bound write vulnerability in FortiOS SSL VPN daemon allows a remote unauthenticated attacker to execute arbitrary code or commands via specially crafted HTTP requests. The FortiGate appliance on srv-w-009.dc-west.meridian.internal runs FortiOS 7.4.2 and provides SSL VPN access for approximately 200 remote users at DC-West. Active exploitation has been observed in the wild.

[Remediation](#)**FIND-008: CVE-2024-24919 - Check Point Quantum Gateway Information Disclosure**

Affected Host: srv-e-048.dc-east.meridian.internal | IP: 10.1.108.58 | CVSS: 8.6 | Status: Open

A vulnerability in Check Point Quantum Security Gateways allows unauthenticated attackers to read arbitrary files from the gateway filesystem, including sensitive configuration data and password hashes. The device at srv-e-048.dc-east.meridian.internal runs R81.20 and is exposed via the IPSec VPN blade. Active exploitation campaigns have been documented by CISA.

[Remediation](#)

3.2 High Findings (15)

FIND-009: Network Segmentation Violation - Database Server in DMZ

Affected Host(s): srv-e-022.dc-east.meridian.internal | CVSS: 7.2

PostgreSQL 14.2 database instance detected running on a host within the DMZ network segment (VLAN 110). Database services containing production data should not be directly accessible from DMZ-classified network zones. This server is assigned to VLAN 110 (DMZ-East, subnet 10.1.110.0/24) and should be relocated to an internal production segment (VLAN 103). The database handles customer transaction records for the CustomerPortal application (APP-010).

FIND-010: CVE-2024-1709 - ConnectWise ScreenConnect Authentication Bypass

Affected Host(s): srv-e-042.dc-east.meridian.internal | CVSS: 7.5

FIND-011: CVE-2024-27198 - JetBrains TeamCity Authentication Bypass

Affected Host(s): srv-c-028.dc-central.meridian.internal | CVSS: 7.5

FIND-012: CVE-2024-23897 - Jenkins Arbitrary File Read

Affected Host(s): srv-c-005.dc-central.meridian.internal | CVSS: 7.4

FIND-013: CVE-2024-0204 - GoAnywhere MFT Authentication Bypass

Affected Host(s): srv-e-044.dc-east.meridian.internal | CVSS: 7.6

FIND-014: Expired TLS Certificates - Multiple hosts with expired certificates

Affected Host(s): srv-w-022.dc-west.meridian.internal, srv-w-038.dc-west.meridian.internal | CVSS: 7.0

Two hosts in DC-West are presenting expired TLS certificates for HTTPS services. srv-w-022 certificate expired 2024-10-15, srv-w-038 certificate expired 2024-11-02.

FIND-015: CVE-2024-30088 - Windows Kernel Elevation of Privilege

Affected Host(s): srv-e-019.dc-east.meridian.internal | CVSS: 7.8

FIND-016: CVE-2024-38063 - Windows TCP/IP Remote Code Execution

Affected Host(s): srv-c-003.dc-central.meridian.internal | CVSS: 7.5

FIND-017: Weak SSH Key Exchange Algorithms - Diffie-Hellman group14-sha1 enabled

Affected Host(s): srv-w-005.dc-west.meridian.internal, srv-w-014.dc-west.meridian.internal, srv-c-015.dc-central.meridian.internal | CVSS: 7.1

FIND-018: CVE-2024-38077 - Windows RRAS Remote Code Execution

Affected Host(s): srv-e-003.dc-east.meridian.internal | CVSS: 7.5

FIND-019: Unencrypted LDAP Bind - LDAP Clear-text Authentication

Affected Host(s): srv-c-042.dc-central.meridian.internal | CVSS: 7.2

FIND-020: CVE-2024-6327 - Telerik Report Server Deserialization RCE

Affected Host(s): srv-e-051.dc-east.meridian.internal | CVSS: 7.8

FIND-021: SMBv1 Protocol Enabled - Legacy SMB protocol active on production hosts

Affected Host(s): srv-e-035.dc-east.meridian.internal, srv-c-028.dc-central.meridian.internal | CVSS: 7.0

FIND-022: CVE-2024-37085 - VMware ESXi AD Integration Auth Bypass

Affected Host(s): srv-e-015.dc-east.meridian.internal | CVSS: 7.2

FIND-023: Default SNMP Community Strings - SNMP v2c with default 'public' community

Affected Host(s): srv-w-009.dc-west.meridian.internal, srv-c-005.dc-central.meridian.internal | CVSS: 7.5

3.3 Medium Findings (25)

ID	Title	Host(s)	CVSS
FIND-024	CVE-2024-22024 - Ivanti Connect Secure X	srv-e-022.dc-east.meridian.internal	5.3

3.4 Low / Informational Findings (12)

ID	Finding Title	Affected Host(s)	CVSS
FIND-049	ICMP Timestamp Response	srv-e-003.dc-east.meridian.internal	2.1
FIND-050	DNS Zone Transfer Allowed	srv-c-015.dc-central.meridian.internal	3.5
FIND-051	SSH Banner Disclosure	Multiple hosts (14)	1.5
FIND-052	Web Server TRACE Method	srv-e-042.dc-east.meridian.internal	2.0
FIND-053	Outdated jQuery Library	srv-e-044.dc-east.meridian.internal	3.1
FIND-054	Missing robots.txt	srv-w-022.dc-west.meridian.internal	1.0
FIND-055	HTTP to HTTPS Redirect	srv-e-035.dc-east.meridian.internal	2.5
FIND-056	TCP Timestamp Response	Multiple hosts (22)	1.0
FIND-057	SMTP VRFY Command	srv-c-028.dc-central.meridian.internal	3.0
FIND-058	FTP Service Detected	srv-w-038.dc-west.meridian.internal	3.5
FIND-059	NTP Mode 6 Queries	srv-c-003.dc-central.meridian.internal	2.0
FIND-060	SSL Certificate CN Mismatch	srv-w-005.dc-west.meridian.internal	3.0

4. Compliance Status

Meridian Digital Solutions maintains compliance with multiple regulatory and industry frameworks. The following table summarizes the current compliance status as of the Q4 2024 assessment.

Framework	Status	Last Audit	Next Audit	Open Items	Scope
PCI-DSS v4.0	Compliant	2024-09-15	2025-03-15	2 obs. (remediated)	DC-East only
SOC 2 Type II	Compliant	2024-08-01	2025-08-01	0 exceptions	All DCs
ISO 27001:2022	Certified	2024-06-20	2025-06-20	3 minor NCs	DC-East, DC-West
NIST CSF 2.0	Aligned	2024-10-01	2025-04-01	Self-assessment	Enterprise
HIPAA	Compliant	2024-07-10	2025-07-10	1 addressable	DC-East PHI data
CIS Controls v8	IG2 Aligned	2024-12-06	2025-06-06	4 controls partial	All DCs

SOC 2 Type II: The most recent SOC 2 examination covered the period February 1 through July 31, 2024. No exceptions or qualified opinions were noted. The next examination period begins August 1, 2024.

PCI-DSS v4.0: Meridian transitioned from PCI-DSS v3.2.1 to v4.0 during Q3 2024. Two observations related to multi-factor authentication for administrative access to cardholder data environments were identified and remediated prior to the assessment deadline. Current scope covers the e-commerce payment processing infrastructure at DC-East.

ISO 27001:2022: Three minor nonconformities were identified during the June 2024 surveillance audit relating to supplier security assessment documentation. Corrective actions have been submitted and accepted by the certification body. Note: DC-Central ISO 27001 certification lapsed in September 2024; remediation plan targets re-certification by Q2 2025.

HIPAA: One addressable implementation specification relates to workstation security practices for IT staff accessing ePHI environments remotely. An enhanced VPN configuration with endpoint health attestation is being deployed through the Zscaler Zero Trust platform.

5. Penetration Test Summary

5.1 External Penetration Test

An external penetration test was conducted from October 21-25, 2024 by the internal red team with supplemental support from a third-party assessor (Mandiant). The test targeted all externally accessible services including web applications, VPN endpoints, email gateways, and DNS infrastructure.

External Attack Surface Summary:

- Public IP addresses tested: 28
- Web applications assessed: 12
- VPN endpoints tested: 4 (2 GlobalProtect, 1 Ivanti, 1 FortiGate SSL VPN)
- DNS zones tested: 6
- Email gateways tested: 2

External Test Findings:

- 2 Critical: CVE-2024-3400 on PAN-OS GlobalProtect (FIND-003), CVE-2024-21887 on Ivanti (FIND-002)
- 3 High: Expired TLS certificates, weak cipher suites on legacy SMTP relay, exposed management interface
- 5 Medium: Information disclosure through verbose error pages, DNS zone transfer on secondary NS
- 4 Low: HTTP header disclosures, cookie security flags

Tester successfully achieved initial access through the Ivanti Connect Secure vulnerability (FIND-002) on srv-e-022.dc-east.meridian.internal and was able to pivot to an internal network segment. The database server on the same host was directly accessible due to the DMZ placement violation (FIND-009). This attack chain demonstrates the interconnected risk between the CVE and the network segmentation finding.

Time to initial access: 4 hours 17 minutes

Time to lateral movement: 6 hours 42 minutes

Domain admin achieved: No (blocked by PAM controls)

5.2 Internal Penetration Test

An internal penetration test was conducted from November 4-8, 2024 from a network drop within DC-East VLAN 101 (Prod-East-A). The test assumed a compromised workstation scenario with standard user credentials.

Internal Test Results:

- Hosts discovered via ARP scan: 153
- Services enumerated: 1,247 across all hosts
- Credential harvesting: 3 service accounts with reusable passwords discovered
- Lateral movement paths identified: 7
- BloodHound AD attack paths to Domain Admin: 2 (both requiring chained exploitation)
- Kerberoastable service accounts: 4

Notable Internal Findings:

1. SNMP v2c with default 'public' community string on 2 hosts (FIND-023)
2. Redis instance on srv-c-012 accessible without authentication (FIND-035)
3. PostgreSQL on srv-e-022 allows trust authentication for local connections (FIND-042)
4. NFS exports with root squash disabled permit unauthorized data access (FIND-040)
5. Three service accounts with passwords set over 365 days ago and no rotation policy

Active Directory Assessment:

- Total AD objects evaluated: 4,812
- Stale computer accounts (90+ days inactive): 23
- Users with admin privileges exceeding role requirements: 8
- Service accounts with interactive logon capability: 6

6. Remediation Status Tracker

The following table tracks the remediation progress of findings from the Q3 2024 assessment as well as the newly identified Q4 findings. Of the 38 findings from Q3, 31 have been fully remediated (82%), 4 are in progress, and 3 have accepted risk waivers.

Finding ID	Severity	Status	Target Date	Owner	Notes
Q3-FIND-001	Critical	Remediated	2024-08-20	D. Chen	Patched vSphere ESXi cluster
Q3-FIND-002	Critical	Remediated	2024-08-22	T. Hartley	Firewall firmware upgrade
Q3-FIND-003	Critical	Remediated	2024-08-18	R. Kim	Apache Struts update applied
Q3-FIND-004	Critical	Risk Accepted	Waiver	CIO	CentOS 7 EOL system - decomm Q1
Q3-FIND-005	High	Remediated	2024-09-01	D. Chen	SSL certificate renewed
Q3-FIND-006	High	In Progress	2025-01-15	M. Santos	App refactor required
Q3-FIND-007	High	Remediated	2024-09-10	T. Hartley	Network ACL updated
Q3-FIND-008	High	Risk Accepted	Waiver	CIO	Legacy system - decomm planned
FIND-001	Critical	Open	2024-12-24	D. Chen	VMware vCenter patch scheduled
FIND-002	Critical	Open	2024-12-24	T. Hartley	Ivanti upgrade in progress
FIND-003	Critical	Open	2024-12-24	R. Kim	PAN-OS emergency patch planned
FIND-004	Critical	Open	2024-12-24	D. Chen	OpenSSH update scheduled
FIND-009	High	Open	2025-01-10	T. Hartley	VLAN migration pending CAB approval
FIND-010	High	Open	2025-01-10	D. Chen	ScreenConnect upgrade queued
FIND-011	High	Open	2025-01-10	M. Santos	TeamCity update in testing

7. Risk Trend Analysis

The following table presents the quarter-over-quarter vulnerability trend analysis for the 2024 fiscal year. Risk scores are calculated using a weighted formula based on CVSS severity distribution and mean time to remediate (MTTR).

Metric	Q1 2024	Q2 2024	Q3 2024	Q4 2024	Trend
Total Findings	28	32	38	60	Increasing
Critical	2	3	4	8	Increasing
High	5	5	6	15	Increasing
Medium	10	12	14	25	Increasing
Low/Info	11	12	14	12	Stable
Unique Hosts Affected	12	14	16	25	Increasing
MTTR Critical (days)	8.5	9.2	11.2	TBD	Degrading
MTTR High (days)	22	24	27	TBD	Degrading
Remediation Rate	92%	89%	82%	In progress	Declining
Risk Score (1-100)	42	48	55	72	Elevated
External Attack Surface	32 IPs	30 IPs	29 IPs	28 IPs	Improving
Patch Compliance Rate	96%	94%	91%	87%	Declining

Analysis:

The upward trend in total findings and Critical severity items reflects both an expanding threat landscape and the maturation of scanning capabilities. The introduction of authenticated scanning in Q3 increased detection rates significantly. The declining patch compliance rate (from 96% to 87%) correlates with increased infrastructure load during the holiday freeze period and delayed maintenance windows.

The risk score has increased from 42 in Q1 to 72 in Q4, crossing the organizational threshold of 60 which triggers enhanced monitoring requirements and mandatory monthly CISO briefings. Contributing factors include the PAN-OS and VMware zero-day disclosures, expanding attack surface from emergency server provisioning (SRV-E-056 through SRV-E-060, SRV-W-051), and aging infrastructure at DC-Central.

8. Security Incident Summary

The following security incidents were recorded during Q4 2024 and are referenced in the incident management log:

- INC-2024-0451: SupplyChainPro capacity exceeded (SRV-W-034) - October 3, 2024
- INC-2024-0489: SupplyChainPro database configuration error (SRV-W-034) - October 22, 2024
- INC-2024-0423: Salesforce-Integration emergency patch (SRV-C-008) - June 15, 2024
- INC-2024-0445: Salesforce-Integration WAN outage (SRV-C-008) - September 2, 2024

No confirmed data breaches or regulatory notification events occurred during Q4 2024. Two potential phishing campaigns targeting executive staff were detected and blocked by CrowdStrike Falcon.

Total security incidents: 4 confirmed, 2 blocked, 0 breaches
Average incident response time: 23 minutes (within 30-minute SLA)

9. Recommendations and Next Steps

Based on the Q4 2024 assessment findings, the Information Security Team recommends the following actions for the Q1 2025 planning period:

Immediate Actions (within 14 days):

1. Remediate all 8 Critical findings (FIND-001 through FIND-008) per SEC-POL-012
2. Emergency patch PAN-OS on srv-w-031.dc-west.meridian.internal (CVSS 10.0)
3. Initiate emergency change request for VMware vCenter Server patch on srv-e-015
4. Begin VLAN migration planning for srv-e-022 from DMZ to internal production segment

Short-term Actions (within 30 days):

5. Remediate all 15 High findings (FIND-009 through FIND-023)
6. Renew expired TLS certificates on DC-West hosts
7. Deploy SNMP v3 configuration to replace v2c community strings
8. Implement Redis authentication for exposed instances at DC-Central
9. Complete BloodHound-identified AD attack path remediation

Medium-term Actions (within 90 days):

10. Remediate all 25 Medium findings and 12 Low findings
11. Conduct comprehensive CIS Hardening Guidelines hardening across DC-Central servers
12. Deploy certificate lifecycle management solution to prevent future expirations
13. Implement automated patch compliance reporting with Qualys VMDR
14. Review and update network segmentation architecture for DC consolidation planning

Strategic Recommendations:

15. Accelerate DC-Central ISO 27001 re-certification (lapsed September 2024)
16. Evaluate SASE migration to reduce external attack surface
17. Implement microsegmentation in VMware NSX-T across all production VLANs
18. Establish vulnerability SLA dashboards with automated executive reporting
19. Budget for continuous penetration testing engagement (quarterly external, monthly internal)
20. Review emergency-provisioned servers (SRV-E-056 to SRV-E-060, SRV-W-051) for compliance

A. Appendix A: Scan Tool Configuration

Qualys VMDR Configuration:

Scan Profile: Full Authenticated Network Scan v4.2
Plugin Update: December 5, 2024
Authentication: Windows - Domain Admin (scan-svc-qualys), Linux - SSH key-based (scan-svc-nix)
Port Scan Range: Full TCP (1-65535), Top 1000 UDP
Scan Intensity: Normal (3/5)
Concurrent Scans: 15 hosts per scanner appliance

Tenable.io Configuration:

Scan Template: Advanced Network Scan
Plugin Feed: 202412050200
Authentication: Same as Qualys (shared credential vault)
Compliance Plugins: CIS Level 1 + Level 2 for Windows Server 2019/2022, RHEL 8/9, Ubuntu 22.04

Burp Suite Configuration:

Scan Type: Active + Passive

Target Scope: All externally accessible web applications (12 targets)

Authentication: Session tokens provided by application owners

Out-of-Scope: Production databases, third-party SaaS integrations

B. Appendix B: FQDN to IP Mapping Reference (Partial)

The following table provides a partial mapping of FQDNs to IP addresses for hosts referenced in this assessment. For the complete IP assignment table, refer to the `network_topology_and_vlan_assignments` document maintained by the Network Operations team.

FQDN	IP Address	VLAN	Data Center
srv-e-015.dc-east.meridian.internal	10.1.101.25	101	DC-East
srv-e-022.dc-east.meridian.internal	10.1.110.45	110	DC-East
srv-e-035.dc-east.meridian.internal	10.1.115.45	115	DC-East
srv-e-042.dc-east.meridian.internal	10.1.102.52	102	DC-East
srv-e-044.dc-east.meridian.internal	10.1.104.54	104	DC-East
srv-e-048.dc-east.meridian.internal	10.1.108.58	108	DC-East
srv-e-051.dc-east.meridian.internal	10.1.111.61	111	DC-East
srv-w-009.dc-west.meridian.internal	10.2.109.19	209	DC-West
srv-w-022.dc-west.meridian.internal	10.2.102.32	202	DC-West
srv-w-031.dc-west.meridian.internal	10.2.100.41	200	DC-West
srv-c-003.dc-central.meridian.internal	10.3.103.13	301	DC-Central
srv-c-005.dc-central.meridian.internal	10.3.105.15	301	DC-Central
srv-c-012.dc-central.meridian.internal	10.3.102.22	302	DC-Central

Note: This mapping covers only hosts with High or Critical findings. Not all production hosts are listed. The VLAN assignments sourced from the latest network scan data may differ from the authoritative VLAN assignment register maintained separately. For complete IP-to-hostname resolution, consult the DNS infrastructure or the `server_asset_register`.

Appendix C: Detailed Configuration Audit Log

The following table lists detailed system configurations, open ports, and protocol compliance data obtained during credentialed scans in Q4 2024. This log is used to verify compliance with the Meridian Hardening Standards (SEC-STD-004).

Host FQDN	IP Address	Open Ports	Protocols Allowed	Hardening Score	Status
srv-e-001.dc-east.meridian.internal	10.1.101.11	22, 443	TLS 1.2, TLS 1.3	94%	Compliant
srv-e-002.dc-east.meridian.internal	10.1.101.12	22, 80, 443	TLS 1.2, TLS 1.3	94%	Compliant
srv-e-003.dc-east.meridian.internal	10.1.101.13	22, 443	TLS 1.0, TLS 1.1, TLS 1.2	94%	Compliant

Appendix D: Vulnerability Remediation Tracking Log

This appendix provides a detailed tracking log of all vulnerability findings from Q4 2024 credentialed scans and their remediation status. Each entry includes the originating scan date, the host affected, the vulnerability identifier (CVE where applicable), severity classification, assigned remediation owner, and current status. This log is maintained by the Security Operations team and is updated weekly.

Remediation timelines are governed by the Meridian Vulnerability Management Policy (SEC-POL-007 v3.2) which mandates: Critical findings must be remediated within 72 hours, High findings within 14 calendar days, Medium findings within 30 calendar days, and Low findings within 90 calendar days. Exceptions require written approval from the CISO.

Scan Date	Host FQDN	CVE/ID	Severity	Description	Owner	Status
2024-12-02	srv-e-001.dc-east.meridian.i	CVE-2024-1709	High	Jenkins CLI read	P. Morales	Remediated
2024-11-11	srv-e-002.dc-east.meridian.i	CVE-2024-28995	Critical	TCP/IP stack RCE	R. Kim	Remediated
2024-10-04	srv-e-003.dc-east.meridian.i	CVE-2024-1709	Critical	ASA webVPN DoS	J. Patterson	Remediated

Appendix E: Network Perimeter Scan Results

External perimeter scans were conducted weekly throughout Q4 2024 by the Security Operations Center. The following table summarizes findings from each scan cycle, including exposed services, certificate validation results, and protocol compliance. All external-facing endpoints are validated against the Meridian Perimeter Hardening Standard (SEC-STD-009).

The scan methodology employs both automated port scanning (TCP SYN scan across all 65,535 ports) and application-layer protocol analysis. TLS version compliance is verified against the minimum standard of TLS 1.2. Certificate chain validation includes root CA trust verification, intermediate certificate completeness, and expiration monitoring with a 60-day warning threshold.

Scan Week	Endpoint	Exposed Ports	TLS Version	Cert Valid	Cert Expiry	Finding
2024-10-01	portal.meridian.com	443	TLS 1.3	Yes	2024-11-23	None

Appendix F: Firewall Rule Audit Summary

A comprehensive audit of all firewall rule sets was conducted in November 2024 as part of the quarterly security review. The audit covered all perimeter firewalls (FW-EAST-01/02, FW-WEST-01/02, FW-CENTRAL-01), internal segmentation firewalls, and application-layer firewalls. Rules were evaluated for: necessity (active traffic match in last 90 days), specificity (no overly broad source/destination ranges), protocol compliance (no deprecated protocols), and documentation (business justification recorded).

Total rules audited: 2,847 across 5 firewall clusters. Findings: 127 rules with no traffic match in 90+ days (candidates for removal), 34 rules with overly broad CIDR ranges (requiring tightening), 8 rules permitting deprecated protocols (TLS 1.0/1.1, SSLv3), and 215 rules missing business justification documentation.

Firewall	Rule ID	Source	Destination	Port/Proto	Last Hit	Action	Finding
FW-EAST-01	R0001	10.3.168.0/24	10.3.164.0/24	TCP/5432	2024-08-03	Allow	No traffic 90+ day
FW-EAST-01	R0002	10.3.143.0/24	10.2.160.0/24	TCP/443	2024-11-25	Allow	None
FW-EAST-01	R0003	10.3.123.0/24	10.1.118.0/24	TCP/80	2024-08-23	Allow	No traffic 90+ day

Appendix G: Security Incident Response Log - Q4 2024

The following log records all security incidents investigated by the Security Operations Center during Q4 2024. Incidents are classified using the NIST SP 800-61 Rev 2 incident classification taxonomy. Each entry includes the detection source, initial triage outcome, investigation summary, and containment actions taken.

The SOC operated in a 24x7 model with 3 analyst shifts throughout Q4 2024. Alert volume averaged 847 alerts per day with a 4.2% true positive rate after initial automated filtering. Mean time to detect (MTTD) was 12 minutes and mean time to respond (MTTR) was 43 minutes for high-severity incidents.

Date	Incident ID	Category	Severity	Source	Affected System	Status	MTTR
2024-10-18	SEC-0001	Phishing	High	SIEM Alert	srv-c-067.dc-central	Resolved	237 min
